Objective

I am a B.Tech graduate with a good Knowledge in Python, HTML, and CSS, and a deep interest in AI and chatbot development. I developed **AGROChatBot**, a multilingual, voice-enabled assistant for farmers using React.js and Node.js, featuring real-time translation and NLP-based recommendations. I also completed an **IBM Cloud internship**, where I built the **Agentic AI Health Symptom Checker** using IBM Watsonx and Granite models to provide intelligent, verified health insights. Skilled in natural language processing, cloud integration, and AI-driven automation.

Education

Presidency University, Bangalore BTech CSE(IOT) GPA: 6.69/10	Sep 2021 – July 2025
Sai Sree Chaitanya Junior College, Palamaner MPC GPA: 6.24/10	June 2019 – Mar 2021
ST. Mary's English Medium School, Chittoor School GPA: 9.3/10	June 2018 – May 2019

Skills

Languages: HTML/CSS, Python

Databases: SQL

Technologies: Microsoft SQL server, Visual Studio Code

Soft Skills: Analytical Thinking, Problem-Solving

Projects

Automatic Human Following Trolley Using Raspberry Pi	2022
- Designed a smart shopping trolley that autonomously follows a user by detecting their shirt color using OpenCV and HSV-based color tracking. - Integrated HC-SR04 ultrasonic sensors for obstacle detection and avoidance, ensuring smooth movement. - Developed a motorized control system using Raspberry Pi to maintain a constant distance from the user. - Enhanced user convenience by eliminating the need for manual trolley handling in shopping malls. - Tools Used: Raspberry Pi, OpenCV, Mobile SSD, Python, HC-SR04 Ultrasonic Sensors, Quantum USB Camera.	
AGROCHATBOT Chatbot for Farmers	2025
- Designed and deployed an AI chatbot using NLP and ML to deliver real-time agricultural support. - Implemented a multilingual dialogue system with intent detection and entity extraction using LLMs. - Developed a yield prediction engine leveraging weather, soil, and crop data for smart forecasting. - Integrated voice-based interaction (STT/TTS) and image-based crop diagnosis using computer vision. - Tools Used: React.js, Python, Flask, Node.js, NLP, TTS/STT APIs.	

Internship & Certifications

Agentic AI Health Symptom Checker IBM Cloud Internship	August 2025
- Designed and developed an AI-powered health assistant using IBM Watsonx and Granite models. - Implemented LangGraph for agentic workflow and symptom analysis logic. - Enabled users to input symptoms in natural language and receive verified health guidance. - Integrated trusted medical data sources (WHO, CDC) to ensure accuracy and reliability. - Focused on early detection, health awareness, and minimizing self-diagnosis risks. Technologies Used: IBM Watsonx, IBM Granite LLM, LangGraph, Python, Cloud APIs, JSON, NLP
